SPECIAL PROJECT - MEGASTAR 10 INSTALLED AT FIVE STARS CASINO IN THE NETHERLANDS

As one of the leading companies in the production of gaming machines and electromechanical generators, Elektroncek d.d. has placed particular emphasis on the growth and development of new products. Our experience points to significant demand for integral solutions in refurbishing gaming rooms and casinos, which is why we have given special attention to the production of custom-made equipment.

The electromechanical roulette, Megastar 10 was successfully installed at the Five Stars Casino in Oosterhout, the Netherlands. The Roulette with 8 play stations is one of the G3 generation of products and it is known for its reliability and robust but elegant design.

Mr. Klemen Sitar, Regional Sales Manager, commented:

"We have installed a completely custom-made machine. For the project we used our basic MTGM product Megastar 10 which is our highest selling product in the Dutch market."

"At the client's request we added two semi-circular batteries of 6 play stations. Players can now play in a separate smoking area on 6 individual terminals, which are connected to the Megastar 10 Roulette. The machine is furnished with a specially selected type of imitation alligator skin leather. Casing of the play stations is completely black, that's why light and copper details stand out perfectly."

"The machine is highly functional and its design, shape and overall presentation blends in very well with the interior of the casino."

We hope more clients will select this kind of customized gaming solution in the future, as each project represents a great challenge for our company from which we derive even greater satisfaction!
