UNITED STATES | 06/16/2010

(US).- Interblock USA announced the latest North American installation; the debut of the TwinStar 10 Roulette 10, the first of its kind in the world, in Pala Casino Spa & Resort, in Southern California.

TwinStar is a pair of 5-station Megastar units back to back with 55" LED displays featuring a live camera feed of the game and the extensive game history that the 'Player Information Display' (PID) offers to players.

Brad Martin, Business Development Manager, commented: "Pala is a market leader in their region and has for years led the way with its range of Roulette and slot offerings. We're proud to be a part of their operation. By offering the Megastar with such a purposeful, unique and attractive display, we're confident Pala's players will have a rapid acceptance of the games."

Interblock's Megastar is a unique offering in the region, being the only slot device with a live spinning wheel. "We look forward to offering our guests the only slot roulette machine with this configuration in Southern California and the only game with actual live wheel play," said Mike Crenshaw, Vice President of Casino Operations for Pala Casino Spa & Resort.

The Player Information Display contains detailed statistical information including the previous 42 game results, graphical representations of frequency of each number over the last 500 games, and percentages on red/black, odd/even, columns, streets and more. Not only does it provide players with the information they want, but it adds to the floor presence of the product.
