Elektroncek installed a custom multigame environment in Slovenian casino

"Organic Twins" is an impressive looking machine, with utilization of available terminals being the key behind its creation.

SLOVENIA | 09/06/2010

(Slovenia).- Elektroncek announced its latest installation of Organic Twins with two electromechanical roulette centres and Video Blackjack with PID in the end of July at Casino Fortuna in Nova Gorica, Slovenia. "Organic Twins" is an impressive looking machine, with utilization of available terminals being the key behind its creation.

This multi-game, multi-denominational offering allows players to flip between games as they desire, with the objective of increasing play on each individual station through giving players what they want, when they want it. The use of "Player Information Displays" in the centre of the machine allows players on one side of the machine to see what's happening with the game on the other side, as well as each player screen housing a live video feed of the game in play.

Primoz Bohinc, Regional Sales Manager, Elektroncek, explained: "It is very exciting that also Slovenian casino operators decided to set the G4 range of products from the Organic Twins family in their casino, allowing visitors to choose among several different games on

individual game shot. Fortuna Casino had the courage to decide to offer their visitors a unique experience of playing two electromechanical roulette and video game Blackjack.”

“Twins certainly looks imposing on the floor and is sure to grab the attention of anyone near. This is the first gaming machine of its kind in Slovenia and we strongly hope to be the major contribution to the visibility of the G4 Organic gaming products that operate on Multigame platform, because we believe, that is the future of MTGM's,” he concluded.
